

# **10MW photovoltaic container for water treatment plant**

## Overview

---

Water and energy are intimately related, as water is required for energy applications and energy is required for water-based technologies. Two large groups of photovoltaic adoptions have been identified.

Can wastewater treatment plants be used for solar PV projects?

The potential of using wastewater treatment plants for solar PV projects is found to be economically viable in twenty six urban sites of China. Self consumption of the PV power by the waste water treatment plant and solar radiation potential of the plant plays an effective role in deciding the economic viability of this initiative.

Where are solar PV wastewater treatment plants located?

Most of the solar PV adopted wastewater treatment plants are located in California, USA. For wastewater treatment plant capacity of above 5 Million Gallons per day inflow, around 8–30% of its energy demand is met by solar PV modules.

Can solar power be used in wastewater treatment plants in China?

Self consumption of the PV power by the waste water treatment plant and solar radiation potential of the plant plays an effective role in deciding the economic viability of this initiative. The feed-in-tariff of the electricity generated by PV modules in wastewater treatment plants in China ranges between 0.034 and 0.063 USD/kWh [ 55 ].

How does LZY's photovoltaic power plant work?

LZY's photovoltaic power plant is designed to maximize ease of operation. It not only transports the PV equipment, but can also be deployed on site. It is based on a 10 - 40 foot shipping container. Efficient hydraulics help get the solar panels ready quickly.
