

# **AC and DC Uninterruptible Power Supplies**

## Overview

---

What is a DC uninterruptible power supply?

A direct current uninterruptible power supply (DC UPS) provides that. This guide provides information about DC uninterruptible power supplies. What Is a DC UPS?

A DC UPS is a power system that provides uninterrupted direct current power when the primary power source is disrupted.

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

What is a DC UPS?

A DC UPS is a power system that provides uninterrupted direct current power when the primary power source is disrupted. This backup power solution keeps essential equipment and systems running without interruptions. DC UPS units are commonly used in applications that require constant power flow.

How to choose a power supply for a DC application?

Select the appropriate power supply, uninterruptible power supply, and battery module for your application. Furthermore, our UPS modules with integrated power supply or integrated battery module offer a space-saving UPS solution. Our uninterruptible power supplies for DC applications provide reliable protection against supply interruptions.

## AC and DC Uninterruptible Power Supplies
