

Base station power cabinet has no charging current

Overview

Do you need a battery replacement for a portable power station?

These typically require professional servicing or battery replacement. A comprehensive guide to diagnosing and resolving common portable power station issues, from not turning on to solar charging failures, ensuring minimal downtime and maximum device lifespan.

Why does my power station say 100% charge?

Even if the display on your power station says 100%, the real charge level may be a little lower. Most of the time, the BMS adds a small surplus to the charge at the top. To keep things simple, it tells the user that the charge is 100%, but it stops charging just short of the physical limit to protect the battery cells.

Why is my power station not charging?

Sometimes the issue isn't with the power station itself, but with the source of the electricity. Whether you're using a wall outlet, solar panels, or your car, a weak or unstable power source can prevent a full charge. The problem could be a broken wall plug or an extension cord that is overloaded.

How do I Reset my base station Pro?

If you notice that your Base Station Pro has stopped charging devices, is intermittently charging, or the LEDs are continuously blinking orange or white, reset the unit by unplugging the charger from its power source, waiting 3 seconds, then plugging it back in.
