Bifacial N-type solar modules

Overview

Transparent backsheet is adopted to encapsulate PV modules to take the advantages of the potential of N-type monocrystalline bifacial solar cells. The energy output of bifacial modules is significantly.

What are bifacial and monofacial solar cells?

Front and rear view of monofacial and bifacial photovoltaic (PV) modules . Bifacial solar cells encased in a glass/backsheet structure provide more power under standard test conditions (STC) than glass/glass PV bifacial modules.

What is n type bifacial PV module advantage?

N type bifacial PV module advantage. A bifacial module is averagely 4.03% higher than that of a regular module for micro inverter. Bifacial modules is averagely 3.21% higher than that of the regular modules for string inverter. 1. Introduction N-type monocrystalline silicon solar cell is a high efficiency and low cost photovoltaic technology.

How bifacial solar panels work?

In the application of bifacial modules, part of sunlight illuminates the front side of the module, meanwhile partial sunlight reflected from the ground surface reaches the module from the rear side. Compared with the regular PV modules, the energy output is hence enhanced.

What is the difference between bifacial solar panels and PV modules?

The power generation capacity of PV modules depends on power degradation, temperature coefficient, operating temperature, bifacial generation performance, low irradiance performance, etc. While both types of modules are based on half-cut bifacial solar cells, the energy yield difference are mainly due to cell technology performance.

Bifacial N-type solar modules

[N-Type Bifacial Module with Double Glass Type: ...](#)

Type: DMxxxM10T-B72HSW Power Range: 575 - 590 W Max. Efficiency : 22.8 % Bifacial Module Application Up to 25 % higher electricity yields due to active cell technology in ...
