

Boston solar container battery Air Transport

Overview

What types of batteries can be transported by air?

You will encounter two main types when transporting lithium batteries by air: lithium ion batteries and lithium metal batteries. Lithium ion batteries, often used in consumer electronics like laptops and smartphones, are rechargeable and have a typical energy density of 160–270Wh/kg for NMC Lithium battery and 180–230Wh/kg for LCO Lithium battery.

Can You ship battery-powered IoT devices by air?

If you're planning on shipping your batteries or battery-powered IoT devices by air, sea, rail or road then there are a number of rules that must be adhered to. Lithium batteries are classed as dangerous goods, only for the purpose of transportation.

Can lithium batteries be transported by air?

Use cargo aircraft for standalone lithium batteries and never ship damaged or recalled batteries to avoid penalties and safety hazards. You will encounter two main types when transporting lithium batteries by air: lithium ion batteries and lithium metal batteries.

Can I ship lithium ion batteries on cargo aircraft only?

You must ship these batteries on cargo aircraft only. This rule applies to both lithium-ion and lithium metal batteries shipped without equipment. Cargo Aircraft Only (CAO) Label: You must affix a CAO label to every package containing standalone lithium batteries.
