## Overview

---

How much do solar panels cost?

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

How much does a solar system cost per watt?

Pro tip: It can be helpful to know your solar price per watt before and after claiming the 30% tax credit. Ultimately, many factors figure into the price per watt of a solar system, but the average cost is typically as low as \$2.75 per watt.

How many kilowatts does a solar system use?

Solar systems are sized in kilowatts (kW) and are typically designed to offset 100% of your average annual electricity usage. For reference, the average U.S. household consumes 10,000 kWh of electricity per year and, with average sunshine, would need a 7.5 kW solar system to offset their electricity charges.

Is the price of solar panels falling?

Is one solar panel enough to power a house?

One solar panel is not enough to power a house. Home solar systems are designed to meet the unique needs of the homeowner, whether it's aiming for 100% offset, oversizing to account for a future EV purchase, or perhaps constrained to specific locations on the roof.
