China solar power to battery in Guinea

Overview

How many people will 84 MW solar power supply in Guinea?

Translated into household equivalents, the 84 MW project could supply more than 360,000 families. The solar plants will contribute substantially to Guinea's overall goal of producing 30% of its energy from renewable sources by 2030, a key part of the country's commitment to the Paris Agreement.

Does Guinea need a solar power plant?

Guinea imports about 130 megawatts of power from neighboring Senegal and Ivory Coast, but that's insufficient to meet demand. "The solar power plants will support sustainable development and strengthen our energy autonomy," the ministry said, without specifying the project's cost or source of funding.

Will Guinea build a solar power plant in 2022?

The solar projects would bring 180 megawatts of new capacity online in a country with a total installed generating capacity of just 1,200 megawatts in 2022. (Bloomberg) -- Guinea plans to build the country's first solar power plants to increase its electricity production by 15% and cut its reliance on West African neighbors.

How will a new energy plant benefit Guinea?

The two plants will make Guinea's energy system stronger, greener and more reliable, bringing an extremely affordable new energy source into a historically fossil-fuel-dominated (and expensively subsidised) market.
