

Cost-effectiveness of U S industrial and commercial energy storage batteries

Overview

How much does a commercial battery energy storage system cost?

Average Installed Cost per kWh in 2025 In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

Should you invest in a commercial battery energy storage system in 2025?

In 2025, investing in a high-quality ESS is not only affordable but essential for energy-forward businesses. Contact GSL Energy today to find the right storage solution for your business. Discover the true cost of commercial battery energy storage systems (ESS) in 2025.

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).
