

# **Earthquake-resistant solar-powered containers for agricultural irrigation in Hargesa**

## Overview

---

Are solar-powered irrigation systems sustainable?

Solar-powered irrigation systems (SPIS) are a clean technology option for irrigation, allowing the use solar energy for water pumping, replacing fossil fuels as energy source, and reducing greenhouse gas (GHG) emissions from irrigated agriculture. The sustainability of SPIS greatly depends on.

What is solar irrigation for agricultural resilience (solar) in South Asia?

Solar Irrigation for Agricultural Resilience (SoLAR) in South Asia aims to sustainably manage the water-energy and climate interlinkages in South Asia.

Can solar irrigation improve water energy food interlinkages?

The project runs from July 2025 till December 2028. Policymakers embed water energy food interlinkages in a socially inclusive manner, to enhance effectiveness of solar agri-tech programs. The project assesses the impact of solar irrigation on Water-Energy-Food (WEF) and climate systems to propose a WEF-sensitive solar irrigation framework.

What is a solar-powered pumping irrigation system?

A solar-powered pumping irrigation system utilizes solar photovoltaic (PV) technology to convert solar energy into electrical power, which drives pumps for water lifting and irrigation. This system does not rely on fossil fuels and avoids environmental pollution.

## Earthquake-resistant solar-powered containers for agricultural irrig

### Portable solar-powered irrigation control station into a container ...

This study explores the design and adaptation of a shipping container into a portable irrigation control station for agricultural operations. The project leverages the ...
