

Electrification energy storage project put into operation

Overview

Where is a 100 MWh energy storage station in China?

(A 100 MWh-scale energy storage station using sodium-ion batteries went into operation on June 30, 2024 in Hubei, central China. Image credit: Hina Battery) China has seen another energy storage project using sodium-ion batteries go into operation, as the new batteries begin to gain wider use in energy storage.

How many kWh can a 100 MWh energy storage station store?

The energy storage station can store 100,000 kWh of electricity on a single charge, which can meet the needs of around 12,000 households for a day. What is a 200 MWh energy storage station?

The energy storage station is the first phase of a 200-MWh project and consists of 42 battery bays. It can store 100,000 kWh of electricity on a single charge, releasing power during peak periods to meet the needs of about 12,000 households for a day and reducing CO2 emissions by 13,000 tons per year, according to Hina Battery.

What is Nanning energy storage station?

The Nanning energy storage station is the first phase of a 100-MWh project, and when the entire project is fully completed, it will be able to provide 73 million kWh of clean electricity annually, meeting the electricity needs of 35,000 households. Hina Battery was founded in 2017 and released its sodium-ion batteries in the same year.

Electrification energy storage project put into operation

First new-type energy storage power station put into operation ...

Upon completion, the project will contribute to forming a 55MW new-type energy storage emergency peaking capacity in Taizhou before this year's peak summer demand period.
