Financing for Solar Containerized Grid-Connected Projects

Overview

Is financing a constraint to the uptake of solar PV?

A recent (2022) report by Benise Joseph entitled “Situation Analysis and Needs Assessment in OECS Member States on Increasing the Diffusion of Solar Energy” identifies financing as a common constraint to the uptake of solar PV in the region.

How to mitigate risk in financing a solar project?

The risk in financing a solar project can be mitigated with proper assessment of the financial and technical viabilities. While the financial viability depends highly on the financing structure and contractual terms, confidence in the technical viability mostly comes from the solar resource assessment exercise.

Does OECS need financing to invest in distributed solar PV?

The need for adequate financing products to enable investment into distributed solar PV has been clearly recognized and accepted across the OECS region. Reducing solar PV prices have contributed to greater uptake but this uptake is still relatively slow when compared to other regions and other Caribbean islands.

What are the financing issues for solar PV?

The main financing issue for solar PV in the region is that of adequate options which can serve a wide cross section of the public. Existing financing only serves those at a certain financial level who can meet certain strict requirements. Having options at each level will allow greater participation and greater uptake in the solar industry.
