

GETON CONTAINERS

# How to expand wind and solar complementarity in solar container communication stations

## Overview

---

This review aims to identify the available methodologies, data, and techniques for mapping the potential of solar and wind energy and its complementarity and to provide significant research and patents regardin.

Is there a complementarity evaluation method for wind and solar power?

Han et al. have proposed a complementarity evaluation method for wind, solar, and hydropower by examining independent and combined power generation fluctuation. Hydropower is the primary source, while wind and solar participation are changed in each scenario to improve power system operation.

Can a wind-solar hybrid system improve complementarity?

In the case of wind-solar hybrid systems, it was found that Complementarity can be enhanced through the dispersion of wind farms but not for solar energy. However, when considering wind farms, the feasibility must consider the requirement for long-distance transmission lines in this scenario.

Does complementarity support integration of wind and solar resources?

Monforti et al. assessed the complementarity between wind and solar resources in Italy through Pearson correlation analysis and found that their complementarity can favourably support their integration into the energy system. Jurasz et al. simulated the operation of wind-solar HES for 86 locations in Poland.

Can a combination of wind and solar power improve consistency?

Liu et al. selected 10 areas from China and calculated the Pearson correlation coefficient between wind and solar power output based on observation data, and proved that the combination of wind and solar power can improve consistency in power output.

## How to expand wind and solar complementarity in solar container

### Globally interconnected solar-wind system ...

A globally interconnected solar-wind power system can meet future electricity demand while lowering costs, enhancing resilience, and supporting a stable, sustainable transition to net-zero emissions.
