

How to install the base station AC power supply

Overview

Do base stations need a power supply?

Power Requirements: Base stations operate on 120V AC power rather than 12V DC, requiring either built-in power supplies or separate AC-to-DC converters. **Size and Ergonomics:** Designed for desktop use, these radios feature full-size controls, making operation more comfortable during extended sessions.

How do I install a power supply (PSU)?

Before installing the power supply (PSU), make sure to install the motherboard in your PC case, along with all the core components such as the CPU (possibly the Intel Core i9-13900K), memory (RAM), and storage drives. You must also have your hard disk drives (HDD) and 2.5-inch SATA SSDs pre-installed in your case before the PSU installation.

How do I set up a base station?

Set up the base station using either the tripod or T-bar mounting method. You must use an external radio antenna kit for the internal 450 MHz or 900 MHz radio. To avoid interference between the 900 MHz radio and GPRS transmissions, do not mount the external radio antenna within 1 m (3.3 ft) of the GSM antenna.

What should I know before installing a power supply (PSU)?

Also, wear an anti-static bracelet during installation to prevent electrostatic damage. Before installing the power supply (PSU), make sure to install the motherboard in your PC case, along with all the core components such as the CPU (possibly the Intel Core i9-13900K), memory (RAM), and storage drives.
