

How to turn off the power supply of solar power generation in base stations

Overview

How to stop a PV system from delivering energy to the grid?

The first thing that must be done is to turn off the AC side. In order to do this, you must go to the meter box and switch off the AC inverter main supply. After that you must turn off the AC breaker. From that moment, your PV system will stop delivering energy to the grid.

How do I shut down my solar system?

If your solar system has a 'shutdown procedure' detailed on the equipment or in the user guide, follow it. go to your switchboard and open it. Locate the solar supply main switch and flick the switch to the off position. go to your inverter and find the switch marked PV Array and DC Isolator.

What is the manual shutdown procedure for a solar PV system?

The manual shutdown procedure can be a useful tool for solving errors and glitches that you're experiencing with your solar PV power system. Follow the guide below to power down your system (and switch it back on again).

How do I Turn Off my Solar System?

When turning off your solar system, you have to take into account what type of system you have, and the fact that if you have a string inverter you will be dealing with two types of current, DC and AC. You will need to make sure that both are powered down and then turned on again, at the right time. To turn off your solar system, you should:
