

Indonesia Wind and Solar Energy Storage Planning

Overview

Will Indonesia deploy 100 GW of solar?

The Indonesian government has revealed a new initiative aiming to deploy 100 GW of solar. The distributed solar for energy self-sufficiency program encompasses 80 GW of solar that will be deployed as 1 MW solar arrays with 4 MWh of accompanying battery energy storage systems (BESS).

Can wind and solar power be used in Indonesia?

On the other hand, wind and solar energy potential are enormous for energy generation in Indonesia. One of the barriers that hinder the use of both is their intermittent nature so that they are not economically profitable and can disrupt the existing power grid.

What is Indonesia's energy storage capacity?

Indonesia's total cumulative installed energy storage capacity has reached around 35 MWh by mid-2024, primarily from BESS installations in distributed, isolated systems supporting solar PV generation. Installed energy storage capacity could exceed 30 GWh by 2030, based on announced projects.

Can energy storage be used together in Indonesia?

Several examples of the application of energy storage together applied in Indonesia. Canary Islands. The project aims to supply the entire island population with 100% renewable energy as previously they relied heavily on conventional diesel fuel. This project is a hybrid wind power system with pumped hydro energy storage.
