

# Italian glass solar modules

## Overview

---

What is the difference between glass and plastic solar modules?

Glass/Glass modules withstand air and moisture and offer best cell protection, while plastic backsheets of glass/foil modules become porous. The Glass/Glass composite protects solar cells against micro cracks and thus ensures long-term operating life of 40 years and more.

What are energyglass photovoltaic components?

EnergyGlass photovoltaic components are designed and manufactured to optimally meet the needs of architectural integration, where transparent or opaque glass is used as a building element.

How much load can a glass/glass module handle?

TÜV tests show that Sonnenstromfabrik Glass/Glass modules can handle loads up to 8.100 Pa. Different to glass/foil modules, Glass/Glass modules are resistant to damages resulting from ammonia in agricultural and industrial installations as well as resistant to damages from salt spray in coastal regions or sand abrasion in desert regions.
