Japan monitors solar power generation systems

Overview

What percentage of Japan's Energy is solar?

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy.

Will Japan's solar energy industry grow in 2029?

Overall, the growth potential for Japan's solar energy sector is immense, which will help spur the country's domestic PV industry. Forecasts suggest the solar energy market will see a compound annual growth rate of 9.2% until 2029.

Why is solar energy so popular in Japan?

Solar energy in Japan, with its relative ease of installation and support through governmental policies, such as generous feed-in tariffs, emerged as a popular choice. This allowed individual consumers to economically invest in residential solar arrays, while developers constructed large utility-scale facilities.

Why is agrivoltaics becoming more popular in Japan?

Moreover, initiatives like agrivoltaics and floating solar power plants are becoming more popular, allowing the country to capitalise on a growing portion of its potential solar capacity. Japan is home to over 50 of the world's 100 largest floating solar facilities and around 2,000 agrivoltaic farms.
