

GETON CONTAINERS

Jordanian Solar Container Corrosion Resistant Type

Overview

What is galvanic corrosion in solar PV?

The life of a solar PV system may be seriously effected by galvanic corrosion. The type of metal and the atmospheric conditions such as moisture and chlorides can cause serious structural failures in racking and mounting components. Galvanic Corrosion and Protection in Solar PV Installations | Greentech Renewables Skip to main content menu.

Can solar PV racking corrosion occur?

The metals in solar PV racking and mounting systems can be faced with corrosion if wrong metals are used together. The life of a solar PV system is 25 years, therefore system installers must target a similar life span for the racking materials. How does galvanic corrosion occur?

Why should you choose a modular solar power container?

Go big with our modular design for easy additional solar power capacity. Customize your container according to various configurations, power outputs, and storage capacity according to your needs. Lower your environmental impact and achieve sustainability objectives by using clean, renewable solar energy.

How to prevent corrosion in PV systems?

The installer has to be careful in choosing the right material. We usually suggest using anodized components to prevent corrosion for the PV systems that are near ocean (salt conditions). Below is a list of best practices for corrosion prevention: Use one material to fabricate electrically isolated systems or components where practical.

Jordanian Solar Container Corrosion Resistant Type

[Types of coating used on solar mounting ...](#)

Galvalume coating: This type of coating is a type of alloy coating that is composed of a mixture of aluminium, zinc, and silicon. Galvalume coating is highly corrosion-resistant and provides excellent protection for steel solar ...
