

# **Khartoum solar tile product introduction**

## Overview

---

What is solar tile?

Solar tile, which combines solar panels and roof tiles, integrates photovoltaic and architecture. Crystal silicon photovoltaic technology and building tile structure are innovated to eliminate the complex project of secondary installation and replace traditional cement tiles and clay tiles with one-time paving.

Are solar laminates compatible with roof tiles?

Solar laminates must be compatible with porous and rough-surfaced roof tiles (Águas et al., 2011). It is shown that the type of substrate tile, including its surface properties and material composition, can significantly impact the deposition process and the optoelectronic performance of the solar cells (Águas et al., 2011).

What are solar roof tiles?

Like solar panels, solar roof tiles are designed to capture the energy from the sun that is shining on your roof and turn that energy into a usable power source for your home.

How do solar tiles work?

Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof. Photovoltaic cells in solar tiles turn sunlight into direct current (DC) energy.
