

# Phnom Penh Energy Efficient Solar System Model

## Overview

---

How much solar power does Phnom Penh need?

Phnom Penh needs some 400 megawatts. We will increase the energy generation capacity by coal-fired power plants,” the Premier was quoted in news reports. Solar power capacity has been on a sharp ascent in Cambodia recently, increasing at a 10% annual rate from less than 1% of national generation capacity, however.

What are the key solar projects in Cambodia?

Key solar projects include: Bavet Solar Power Plant (60 MW) —Cambodia’s first large-scale solar farm. Kampong Chhnang Solar Farm (100 MW) —A major investment in clean energy. Floating Solar Plant in Pursat —The country’s first floating solar project, enhancing land-use efficiency.

What technologies are enhancing Cambodia's solar industry?

Emerging technologies are enhancing Cambodia’s solar industry: Bifacial Solar Panels: Generate electricity from both sides, increasing efficiency. Perovskite Solar Cells: Offer higher energy conversion rates than traditional panels. Battery Storage Systems: Improve energy reliability by storing excess power for later use.

How many solar farms are being built in Cambodia?

That tracker also reveals 620 MW of capacity is on the way from two solar farms currently under construction, with an additional four installations planned. Cambodia is also set to enhance its renewable energy infrastructure with two new storage projects, according to Minister of Mines and Energy Keo Rottanak.
