Phnom Penh Solar Power Tile

[Counting the number of layers in a neural network](#)

Input layer is a layer, it's not wrong to say that. However, when calculating the depth of a deep neural network, we only consider the layers that have tunable weights.

[Adding bias in deconvolution \(transposed convolution\) layer](#)

My question is regarding the transposed convolution operation (also commonly called deconvolution or upconvolution). In TensorFlow, for instance, I refer to this layer. My ...

[How do you visualize neural network architectures?](#)

It's sort of a combination of Netron and wandb.watch. It can: Interactively traverse model architectures, showing input/output tensor sizes and module parameters Visualize ...

[Failed to convert a NumPy array to a Tensor \(Unsupported ...](#)

Cast the inputs to One of a Tensorflow Datatype. `tf.cast(x_train, dtype=tf.float32)`. Because your inputs are type object which has no shape, so first cast the inputs to a proper ...

[Tensorflow, how many layers does this model have?](#)

I'm very new to machine learning and I'm not sure about Tensorflow implementation of neural network model. How many layers does the model below have? model = Sequential () ...
