

RV solar panel awning price

Overview

What is a solar RV awning?

A solar RV awning is a retractable awning made of high-performance solar panels. When the awning is deployed, the solar panels are exposed to the sun to generate power, while the RV's electrical system harnesses it and stores it in the rig's battery bank.

What is the Xpanse solar RV awning?

The Xpanse solar RV awning is constructed of highly efficient, glass-based solar panels. (Photo credit: Xponent Power) The company has even designed the system such that if damage were to occur to a section of the awning, it could easily be replaced with no impact to the rest of the system.

Are solar awnings compatible with caravans & RVs?

The solar awning is designed to be universally compatible with most caravan and RV models. However, it's always a good idea to check specific compatibility requirements or consult with our support team. Note we only can provide flat hardware at this time. So if your van is rounded, packing is required to achieve a flat surface.

Do I need to remove my RV's fabric awning?

No, you don't need to remove your RV's fabric awning. The Xpanse solar awning can be installed on the opposite side of the RV. In fact, it's even possible for two Xpanse awnings to be installed on a single RV, one on either side, doubling the amount of solar power provided!
