Requirements for solar energy systems in Yaounde buildings

Overview

Can a zero-energy building prospective ignore active and passive solar systems?

A zero-energy building prospective cannot disregard an integration of active and passive solar systems. Future activity will focus on exploiting renewable solar energy. 1. I.E.A. (IEA), World energy balances and statistics (2019). 2. F. Kreith, Y. Goswami, Handbook of Energy efficiency and Renewable energy (CRC Press, New York, 2007). 3. B.

Can solar energy be used in buildings?

Solar energy systems can now generate electricity at a cost equal to or lower than local grid-supplied electricity. More importantly, solar energy can provide almost all forms of energy needed by buildings, through active or passive methods. 2. Solar energy applications in buildings.

When will solar installations be required?

Solar installations will be required for new residential buildings for which the building permit application is submitted from 1 January 2030 and where such installations are suitable and feasible.

Should solar systems be integrated in buildings?

Data from the International Energy Agency confirm that in a zero-energy perspective the integration of solar systems in buildings is essential. The development of passive solar strategies has suffered the lack of standard performance indicators and design guidelines.
