

Rooftop communication green base station

Overview

What are the differences between ground and rooftop base station locations?

Ground base station locations are excluded for special areas like schools, but rooftop base station locations are retained, and height restrictions for ground and rooftop base station towers are established.

How high should a rooftop base station tower be?

When constructing new rooftop base station towers, height limitations are set to ensure that the minimum antenna height is not lower than the average building height, and the height of rooftop towers produced by tower manufacturers generally does not exceed 21 meters, with the maximum antenna height not exceeding 40 meters.

What does a green icon on a roof mean?

The green icon represents the centroid coordinates of the rooftop where a base station can be built, which is also the coordinates of a base station that can be built. The black circle represents the coordinates of the existing base stations. The red icon indicates that the base station coordinates cannot be built on the roof.

What is the height of a ground-based base station tower?

Where, h_{suf} is the height of the ground-based base station tower. a , b , and c are the linear relationship coefficients of this function. Based on practical considerations, the height of ground-based base station towers ranges from a minimum of 15 meters to a maximum of 40 meters.

Rooftop communication green base station

[Rooftop Base Station , HuiJue Group E-Site](#)

Each rooftop base station becomes a 3D network probe, mapping signal propagation in real-time. Suddenly, telecom operators aren't just service providers - they're urban digital twin architects.
