Rooftop waterproof solar panels

Overview

What is a solar roof?

A solar roof or rooftop photovoltaic (PV) system is a setup where electricity-generating solar panels are mounted on the roof, utilizing the prime exposure of the rooftop to sunlight and creating one of the most environmentally friendly roofs possible.

Are solar panels waterproof?

Almost always, rooftop or ground-mounted solar arrays will have panels exposed to rainy, wet weather, meaning panels must be waterproof to keep producing power for many years. Because solar panels have been exposed to the elements for several decades, they need to resist water damage as possible. All home solar panels are waterproof.

How can Sika help with a solar PV roof?

Sika can advise how to make your solar PV roof perform optimally, ensuring not only that the PV panels are mounted correctly, but also that the entire roof assembly is designed incorporating vapor retarders where required, proper insulation layers, appropriate fastening technology, correct detailing and more.

Can a solar roof improve thermal comfort?

Brunel University London, in cooperation with the European Cool Roofs Council, Sika Services AG and the University of Technology in Kingston, evaluated a project in Jamaica to study how the application of a solar roof can affect the thermal comfort of residential buildings in hot climates.
