

Solar Panel Protection

Overview

How to protect solar panels from damage?

Have two people lift the solar panels. Such an action prevents any injuries or damages. Avoid climbing ladders while carrying the solar panels. To get the panels to the roof, cranes, hoists, or winch systems that are ladder-based can be good options. These measures prevent workers from getting injuries.

How do I protect my solar panels during a storm?

Install a protective cover on your solar panel. If your solar panels are easily accessible (such as ground-mounted solar panels), you can place the cover over your solar panel before storms. Check with your solar panel installer to see if there is a cover designed for your panels. Use a tarp or blanket to cover your panels.

How to protect solar panels from heat?

Thermals Sub-System should protect the solar panels from heating above 70C. They should maintain the temperature range of the battery within 0C to 30C. They should maintain the temperature of the board within the operating temperature range of the components (industrial grade) i.e. -40C to +85C.
