

GETON CONTAINERS

Solar container outdoor power in Moldova

Overview

How much energy does Moldova need in 2023?

This means that in summer CHPs are off, and the imports from Transnistria meet about 90% of the total domestic electricity demand. Committed renewable energy capacity in the Republic of Moldova by 2030 is expected to reach 700MW. In 2023, renewable energy generation met 10.5% of the energy demand, compared to 5.5% in 2022.

How important is Moldova's cross-border power system?

Geographically positioned between Romania and Ukraine, the cross-border power system of the Republic of Moldova is critical for regional energy security and regional integration with the European and Moldova-Ukraine energy markets.

Why is Moldova's electricity supply so vulnerable?

Since November 2023, the MGRES gas-fired power plant in Transnistria is making up for the electricity import deficit from Ukraine. This heavy reliance on external sources, particularly from politically sensitive regions, makes the Republic of Moldova's electricity supply extremely vulnerable.

Why is Moldova a low energy country?

The Republic of Moldova's low energy self-sufficiency, covering only about 21% of its energy needs domestically, makes it heavily reliant on imports, particularly from the Russian Federation for natural gas and Romania for oil products.
