

Solar glass block

Overview

What is solar glass?

Solar glass is a type of glass that is specially designed to harness solar energy and convert it into electricity. It is made by incorporating photovoltaic cells into the glass, allowing it to generate power from sunlight. This innovative technology has gained popularity in recent years as a sustainable and efficient way to produce clean energy.

What is photovoltaic smart glass?

Photovoltaic glass, also known as solar glass or transparent solar panels, is a type of smart glass that uses embedded photovoltaic cells to convert sunlight into electricity to generate electricity.

How does Photovoltaic Glass work?

Photovoltaic glass operates on the same basic principle as any solar system: it converts sunlight into electricity. It uses solar cells made of materials such as amorphous silicon, crystalline silicon, or advanced thin-film technologies. These cells are encapsulated between layers of glass, making the product durable, safe, and functional.

What is Photovoltaic Glass?

Unlike traditional solar panels that absorb visible light, photovoltaic glass converts primarily ultraviolet (UV) and infrared light into electricity, making it suitable for windows, facades and other transparent surfaces of buildings, vehicles and equipment.
