

Southern Europe rooftop solar power generation system

Overview

Can rooftop solar power systems help Europe's energy transition?

Rooftop systems could cover up to 24.4% of the EU electricity consumption (based on 2016 levels). Rooftop solar photovoltaic (PV) systems can make a significant contribution to Europe's energy transition. Realising this potential raises challenges at policy and electricity system planning level.

Are EU member states facilitating rooftop solar deployment?

The report examines EU Member States (Bulgaria, France, Germany, Greece, Italy, Latvia, Lithuania, Portugal, Romania, Spain and Sweden) on their good and bad practices when it comes to facilitating rooftop solar deployment in the EU.

What is the rooftop solar PV comparison update?

The Rooftop Solar PV Comparison Update produced by CAN Europe and eco-union, with contributions from our members, is an updated version of the Rooftop Solar PV Comparison Report published by CAN Europe in May 2022.

How much solar power does Europe have in 2024?

The bulk of EU solar power comes from building installations, which make up around two-thirds (over 220 GW) of current EU solar capacity. Despite a recent slowdown in the rooftop segment, it still provided close to 60% of Europe's newly installed solar capacity in 2024, and the prominence of rooftop solar is unlikely to change in the foreseeable.
