# **Storage temperature of energy storage batteries**

## Overview

---

What temperature should a battery be stored in?

Store batteries at 10-25°C and 40-60% SOC. Avoid temperatures above 30°C or below -20°C. Use climate-controlled environments to mitigate risks of thermal runaway or capacity loss. By adhering to these guidelines, users can extend battery life, reduce safety hazards, and optimize energy retention in devices ranging from EVs to solar storage systems.

What temperature should a lithium battery be stored at?

Proper lithium battery storage temperature management is critical for safety and performance. Key takeaways include: Store batteries at 10-25°C and 40-60% SOC. Avoid temperatures above 30°C or below -20°C. Use climate-controlled environments to mitigate risks of thermal runaway or capacity loss.

What are battery energy storage systems?

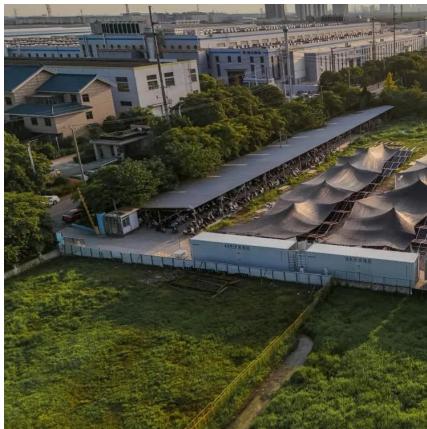

Battery energy-storage systems typically include batteries, battery-management systems, power-conversion systems and energy-management systems 21 (Fig. 2b).

Why do we need a battery energy-storage technology (best)?

BESTs are increasingly deployed, so critical challenges with respect to safety, cost, lifetime, end-of-life management and temperature adaptability need to be addressed. The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs).
