

# Thailand PV Energy Storage Plan

## Overview

---

Should Thailand add 32GW of new solar capacity?

Ember calls for Thailand to add 32GW of new capacity to its existing solar deployment targets. Image: Sungrow. Adding 32GW of new solar capacity, plus 15GWh of batteries, to Thailand's power generation deployment targets could cut power generation costs by as much as US\$1.8 billion.

Are there grid-scale energy storage projects in Thailand?

There are currently few grid-scale energy storage projects in Thailand, although the situation is likely to change. In furtherance of its commitments under the Paris Agreement, the Thai government has enacted policies which envisage renewable energy accounting for the majority of grid capacity and output by 2040.

What is Thailand's power development plan?

Thailand's Power Development Plan (PDP) outlines an ambitious goal: for renewables to exceed 50% of the national power mix in the future. Projects like floating solar farms on dam surfaces are already being piloted and could add up to 500 MW of capacity. But even as policies shift forward, challenges on the ground remain.

Why should Thailand invest in solar energy?

Solar energy is slated to be Thailand's largest renewable energy source in the coming years. It will be critical in driving the country's energy transition and achieving its decarbonisation goals. While growth has been steady, rapid deployment is needed over the next decade to make longer-term targets attainable.
