

# **UK integrated energy storage design solution**

## Overview

---

What are the UK's largest energy storage projects?

Bramley BESS (Hampshire): 100 MW / 331 MWh, currently the UK's largest energy storage project. Fidra Energy (Thorpe Marsh): A 1.4 GW / 3.1 GWh BESS being built on a former coal site. Copenhagen Infrastructure Partners (CIP): Two 500 MW / 3 GWh systems planned in Scotland.

What technologies are behind UK energy storage?

From mountainous pumped hydro to cutting-edge cryogenic and compressed air technologies, the UK is deploying a broad portfolio of energy storage solutions to ensure energy security, decarbonisation, and grid resilience. In this guide, we explore the most important and emerging technologies behind UK energy storage. 1. Pumped Hydro Storage:.

What is the energy storage system?

It is designed to support the UK government's energy strategy for transitioning to clean power by providing long-duration energy storage solutions, combining natural gas, hydrogen, and compressed air technologies.

Will new facilities build resilience into UK's energy systems?

New facilities will build resilience into UK's energy systems. Costain, the infrastructure solutions company, has been chosen by EnergyPathways PLC (EPP) to study onshore location sites for EPP's flagship integrated energy storage and decarbonisation project.

## UK integrated energy storage design solution
