# **Ukraine backup power storage policy**

## Overview

---

Should Ukraine build a decentralized and diversified energy system?

The Ukrainian government (2023) recently declared that building a decentralized and diversified energy system—one that is more resilient against military attacks or natural disasters and can enhance energy security while facilitating the transition to renewable energy sources (RES)—will be a key priority.

Does Ukraine need a long-term energy system?

More than ever, Ukraine needs support to transition towards a long-term energy system that is resilient, flexible and secure. The EU has the expertise, the ability and the will to help make that happen. Ukraine's energy systems have suffered significant damage since the full-scale invasion of 2022.

How has Ukraine's energy system changed since the invasion of 2022?

Ukraine's energy systems have suffered significant damage since the full-scale invasion of 2022. As of spring 2024, two thirds of the country's dispatchable power generation capacity has fallen under occupation, been damaged or destroyed. This has been accompanied by a coordinated destruction of the grid network.

Does Ukraine have a reliable energy supply in wartime?

Ukraine's experience demonstrates the immense challenge of ensuring a reliable energy supply in wartime. The same goes for the grid. Ukraine's extensive transmission infrastructure has suffered severe damage in the war, with capacity falling from 56 GW to an estimated 9 GW by the end of 2024.
