

Uninterruptible Power Supply in Cuba

Overview

How many people were left without electricity in Cuba?

(AP Photo/Ramon Espinosa) HAVANA (AP) — Millions of people in Cuba were left without electricity for two days after the nation's energy grid went down when one of the island's major power plants failed. The widespread blackout that swept across the county was the worst in years.

Why is the Cuban electric power system losing its operations?

The so-called thermal generation is the basis of the Cuban Electric Power System, but it suffers from the handicap of an aging and overexploited infrastructure. In addition, it has been losing part of its operations, following the withdrawal of the Mariel, Renté, Nuevitas units and the historic Tallapiedra plant in Havana.

How much electricity does Cuba generate in 2024?

In 2024, electricity generation in Cuba amounted to 14,334 gigawatt-hours (GWh), a drastic drop compared to the 19,070 GWh generated in 2020.

Why is there a power crisis in Cuba?

Such an energy crisis is a reflection of months of constant power outages across the country, aggravated by fuel shortages that have affected the operation of power plants in Cuba.

Uninterruptible Power Supply in Cuba

Power and power in Cuba

Last month, Cuba experienced significant power blackouts, plunging the island into darkness. The blackouts resulted from ongoing issues with the country's aging and underfunded power grid, compounded ...
