

# **What is the energy storage project on Sydney Island in Australia**

## Overview

---

How is energy stored in Australia?

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. To balance energy use across the Australian economy, heat and fuel (chemical energy) storage are also required.

Where will Ausgrid's battery energy storage systems be located?

New South Wales electricity distributor Ausgrid is proposing two, 200 MW / 400 MWh battery energy storage systems to be located in the north coast regional city of Newcastle, and Sydney suburb of Homebush.

Why do we need energy storage systems in Australia?

Clean Energy Council chief policy and impact officer Arron Wood said: “Energy storage systems, such as big batteries, are a critical part of Australia’s future energy mix and act as a reliable back-up system allowing us to store renewable energy for when it is needed most and keep the lights on under all conditions.

Is Ausgrid proposing a battery energy storage system?

Sydney-headquartered distribution network service provider (DNSP) Ausgrid is proposing two, battery energy storage systems (BESS), both in Newcastle and Sydney, New South Wales (NSW), both well in excess of \$30 million (USD 19.7 million) given their state significant development (SSD) classification.
