

What is the use of energy storage batteries in the Middle East

Overview

How big is the battery market in the Middle East and Africa?

Market forecasts suggest that the Middle East and Africa battery market is projected to grow to \$9.98 billion by 2029, driven by policy support, increasing electrification, and a rise in renewable energy investments.

Is large-scale energy storage a viable option in the Middle East?

Until recently, large-scale energy storage was barely a consideration in the Middle East, where fossil fuels have long dominated power generation. With renewable energy projects expanding across the region, energy storage has started gaining traction.

Is energy storage gaining traction in the Middle East?

With renewable energy projects expanding across the region, energy storage has started gaining traction. Unlike Europe, North America, and Asia, where renewable energy and storage technologies are well-established, the Middle East remains in the early stages of development.

How many companies are investing in battery energy storage systems?

Currently, only a few companies have invested in battery energy storage systems (BESS). However, this is expected to change significantly as the renewables sector in the region continues to grow. The region's installed renewable energy capacity reached 32 GW in 2023 and is expected to approach 40 GW by year-end.
