

**With lithium batteries all the way you don't need to change batteries at the station**

## Overview

---

Do I need to fully charge a lithium battery before first use?

To wrap up: No, you don't need to fully charge a lithium battery before first use. It won't hurt, but it's not necessary. What matters more is long-term charging habits and using quality batteries from trusted sources. For safe, reliable, and customizable lithium battery solutions, Ufine Battery is here to help.

When should you recharge a lithium ion battery?

Contrary to popular belief, you don't need to wait until your device is completely drained before recharging. In fact, frequent partial charges are better for lithium-ion batteries. Keep the battery level between 20 and 80 percent in order to preserve battery health.

Does lithium ion battery care really matter?

Lithium-ion battery care doesn't have to be complicated. With these dos and don'ts, you can help your devices stay powered for a long time. Each small step, from maintaining regular charging habits to optimizing screen settings, contributes to the health and lifespan of your device's batteries.

Can a lithium ion battery discharge completely?

While lithium-ion batteries don't suffer from the memory effect like older battery technologies, allowing them to discharge completely can still cause damage. Deep discharges can lead to capacity loss and shorten the battery's lifespan. Recharge your device before it reaches critically low levels, ideally around 20 percent.
