Xia pack batteries generally have fewer labels

Overview

Do lithium-ion batteries need warning labels?

Warning labels (or marking) of these batteries are essential to ensure safe handling, operation, and disposal, thereby mitigating potential safety risks and preventing accidents. This paper examines the labeling practices of over 200 lithium-ion cells from 20 manufacturers and 6 countries and reviews changes in warning labeling from 2003 to 2023.

What are the labeling requirements for lithium ion batteries?

Lithium-ion batteries are widely used in consumer electronics, electric vehicles, and energy storage systems. Their labeling requirements are designed to ensure safe handling and transportation. You must include specific details such as the UN number, hazard class, and proper shipping name on the lithium battery label.

How do I comply with battery labeling requirements?

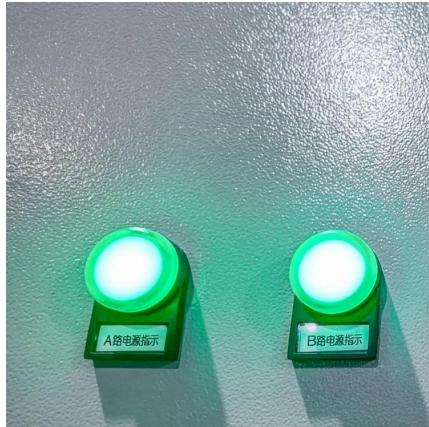

To comply with battery labeling requirements, it's essential we include the battery type, voltage, energy capacity, and rechargeability on durable, easy-to-view labels. We should also provide clear safety warnings and instructions for proper usage and disposal. Placement of the labels is key—not obstructed by packaging—for effective communication.

What are EPA's new battery labeling guidelines?

By developing new voluntary battery labeling guidelines, EPA seeks to increase consumer awareness of the presence of batteries in products and to empower consumers to properly dispose of them, depending on their local collection programs.
